

VALIDATIONS & ERROR MESSAGING

guided notes

VALIDATIONS & ERROR MESSAGING

You need to make sure your users enter ALL the data into a form. Fill in the missing Active Record method:

```
:first_name, :last_name, :birthdate
```

What does the valid? method do?

Does the valid? method go into the Model, View, or Controller?

BONUS: what does that ? at the end of valid? mean? (HINT: This is from your Ruby class!)
