MAKE YOUR ALGORITHM A WEB APP

guided notes

MAKE YOUR ALGORITHM A WEB APP

What are all the pages you will need on your web app? List them!

What should BE on each page? Make a sketch! *What will the user steps be? Write it down!*

Page 1 **Page 2** **Page 3**

What class will you want to put your algorithm into? What file should it go in? What folder?

What does it mean when you call a method on self? Why do you need to do that?

What is Heroku? What will you use it for?

You've made an update to your app, how to deploy the changes to Heroku? Fill in the missing parts:

```
git push                          master
```
