CRUD + REST

guided notes

CRUD + REST

What does CRUD stand for?

C

R

U

D

Why is CRUD such a key concept when it comes to web applications?

What does REST stand for?

RE

S

T

You have written a GET request in your app for "/people/:id" where you see the profile of one user. If you want to see the user with ID = 4, what does your URL end up being?

```
http://localhost:4567/_____
```

When you edit an existing person in your app, you want to submit a PUT request to what path? Fill in the blank:

```
put "_____" do
```

When a user visits the URL http://localhost:4567/new you want them to see your form.erb template. Complete the request:

```
_____  "/new" do
     erb _____
end
```
